

Ox66™

Solutions Powered by Oxygen

While there are various oxygen-infused products on the market, they all originate from a gaseous state. **Ox66™** is the only solid form of oxygen that allows for consuming and combining in various delivery systems.

Taken orally, **Ox66™** provides oxygen to the body via the circulatory system, effectively energizing sluggish systems. Applied topically, **Ox66™** accelerates healing in wounds, burns, bruises and other skin conditions by providing lost oxygen to wounded tissues and cells, reducing the incidence of infection and triggering natural healing responses.

Solutions for Health LLC has infused **Ox66™** into our Sugar Free and Regular Gummies, nano-sized to <10 microns, ensuring the most effective bioavailability and providing the body with additional energy. Solutions for Health LLC is introducing **Ox66™** and CBG infused topical creams to our product line as well.

With over 10 years of testing and research, **Ox66™** has so far received 16 Patents across the globe, reinforcing its potential as a revolutionary new therapeutic. This extensive testing has demonstrated **Ox66™**'s ability to radically improve our health and way of life, enabling one of the most significant therapeutic product breakthroughs of our lifetime.

Clearly **Ox66™**'s ability to provide oxygen makes it of extreme benefit for any insult to the human body resulting in low oxygen levels in cells and tissues.

CBG

CBG (Cannabigerol) is a non-psychoactive cannabinoid that helps make CBD, however the two cannabinoids are made from different compounds within the cannabis plant although with completely different chemical structures. **CBG** is the precursor from which all other cannabinoids are synthesized, which is why it's often referred to as the "mother" or "stem cell" of cannabinoids.

The background of the entire page is a vibrant collage. At the top, the word 'AGRICULTURE' is partially visible in large, stylized letters. Below it, 'ENERGY' is written in a similar font. In the top right corner, there is a circular logo with the text 'its oxygen' and '66' inside. The central part of the image features a variety of fruits: a pineapple, a watermelon, an orange, a peach, a raspberry, and blueberries. A cannabis leaf is also visible, partially obscured by the fruits. The overall color palette is warm and bright, with yellows, oranges, and greens.

CBG works by interacting with the endocannabinoid system (ECS). Together, CB1 and CB2 receptors regulate neurohormones which actively affect physiological processes including mood, metabolism, and pain response.

CBN

CBN (cannabinol) is among the 100+ molecules in the cannabis plant. CBN comes from oxidation and decomposition of the THC, meaning that when THC is heated and exposed to CO₂ (oxygen), it converts to CBN. The compound is said to have a mild psychoactive effect slightly more so than CBD but much less than THC. Specifically, is said to have a sedating effect on most users and to have promising sleep aid applications, similar to melatonin.

At Solutions for Health LLC we use our proprietary cutting-edge Nano technology. The bioavailability of each molecule is enhanced through the Nano emulsification process using ultra-purification water, allowing the CBG/CBN to bypass normal oil digestive processes and enter immediately into the bloodstream, providing a fast-acting delivery.

The **CBG/CBN** used in our Gummies and topicals contains zero THC so it falls within the standards for Hemp outlined in the 2019 Farm Bill. You will also find a 3rd Party Certificate of Analysis (COA) on each batch of any of our **CBG** and **CBN** used in our products confirming its purity and confirming it's free of any insecticides, pesticides or contaminants.

***Our Ox66™, CBG and CBN uses our Nano-Technology and ultra-purification water to provide maximize cellular bioavailability.**
